Summary

Senior Android Developer and Independent App Developer with 5 years of professional experience. Deep expertise in **Kotlin Multiplatform (KMP)** architecture, actively utilized across the majority of my developed projects, alongside a proven track record in enterprise projects serving 20M+ active users. Strong commitment to **Clean Architecture** and **SOLID** principles to deliver testable architectural design, performance optimization, and end-to-end features. Proficient in **Unit & UI Testing** practices and Test-Driven Development (TDD). Entrepreneurial developer profile with **11 published applications** on the Google Play Store (100K+ total active downloads, 4.5+ average rating) and an active, productive GitHub presence.

Experience

Independent (Indie) **January 2026 – Present**
Founder & Senior Android Developer

- Designed, developed, and published **11 Android applications** from scratch on the Google Play Store (reaching 100K+ total active downloads and 4.5+ average rating); managed end-to-end product design, ASO, and release lifecycles.
- Architected cross-platform mobile apps using **Kotlin Multiplatform (KMP)** to achieve 70%+ shared business logic codebase across Android and iOS platforms.
- Designed and implemented robust testable architectures adhering to **SOLID principles** and **Clean Architecture** standards, ensuring scalability and maintainability.
- Established test coverage by executing comprehensive **Unit and UI test scenarios** to ensure zero regression bugs and 99.9% crash-free sessions.
- **Maintained 30+ open-source repositories** on GitHub, actively contributing to the developer community and implementing cutting-edge Android libraries.
- Created an interactive personal portfolio website to showcase production apps and technical documentation.

Turk Telekom **April 2023 – January 2026**
Senior Software Development Specialist

- Spearheaded features for **Online İşlemler** app (serving 20M+ active users), improving system reliability and increasing digital sales conversion rates.
- Engineered modular structures under **MVVM** and **Clean Architecture**, resulting in a 30% reduction in codebase build time and boosting developer velocity.
- Designed and launched highly secure client-side infrastructure modules for end-to-end data encryption and secure transmission.
- Led legacy UI modernization by transitioning key modules from XML layouts to declarative **Jetpack Compose** components.
- Standardized code review processes across a team of 8+ developers, improving quality metrics and reducing post-release bugs by 15%.

Appcent – Metro Market **November 2022 – April 2023**
Android Developer

- Optimized user flows and checkout screens on the Metro Market app, boosting user retention rates by 12% and conversion by 8%.
- Optimized app cold startup speed by 25% through lazy loading, dependency optimization, and visual profiling.
- Refactored RESTful integrations with **Retrofit** and asynchronous **Kotlin Coroutines/Flow**, reducing API latency by 18%.
- Mitigated run-time crashes by 40% through proactive Firebase Crashlytics monitoring and memory leak fixes.

Tekrom & T-SOFT **June 2021 – November 2022**
Android Developer

- Developed modular e-commerce Android application, implementing payment gateway, shopping cart, and product catalog features.
- Optimized background sync operations and client-side database caching using **Room DB**, minimizing offline data sync lag.
- Conducted memory and CPU profiling using Android Profiler to resolve performance bottlenecks and rendering lag.
- Maximized test coverage to 80% with **Unit and UI tests** (JUnit, Espresso), ensuring stable continuous integration (CI) pipeline releases.

Projects

play.google.com/store/apps/developer?id=vahitkeskin

Independent design, development, and publishing of 11 production applications on the Google Play Store (e.g., ActiveNote, Equatix, Tel Çit Hesaplama). Key Stack: Jetpack Compose, MVVM, Clean Architecture, Room DB, Firebase, Retrofit, Material Design 3, Kotlin Coroutines & Flow.

Skills

- **Languages:** Kotlin, Java, Python, Ruby
- **Android Framework:** Jetpack Compose, XML Layouts, Android SDK, Material Design, Navigation Component, ViewModel, LiveData
- **Architecture & Principles:** MVVM, Clean Architecture, SOLID Principles, Repository Pattern, Dependency Injection (Hilt/Dagger/Koin)
- **Asynchronous Programming:** Kotlin Coroutines, Kotlin Flow, RxJava
- **Testing:** Unit Testing, UI Testing, TDD, JUnit, MockK, Mockito, Espresso
- **Cross-Platform:** Kotlin Multiplatform (KMP)
- **Data & Backend:** Room Database, SQLite, Firebase (Auth, Firestore, FCM, Crashlytics), Retrofit, OkHttp, RESTful API
- **CI/CD & DevOps:** Git, GitHub, GitHub Actions, Bitrise, Fastlane, CocoaPods, Docker, Linux
- **Tools & Methodologies:** Android Studio, IntelliJ IDEA, JIRA, Agile/Scrum, Code Review, Google Play Console

Education

Bilecik Seyh Edebali University **August 2016 – July 2021**
Bachelor of Science, Computer Engineering – Faculty of Engineering (GPA: 2.99 / 4.00)

Certifications

- Advanced Android App Development – Udemy
- Computer Hardware Certification
- Ruby Programming Language Training

Languages

- **Military Service:** Completed (Exempt/Done)
- **Languages:** Turkish (Native), English (Professional Working Proficiency – B1/B2)

Community Involvement

- Maintained **30+ open-source repositories** on GitHub covering modern Jetpack Compose architectures and multiplatform designs.
- Conducted technology seminars and workshops for high school and university students, sharing expertise in mobile software engineering.
- Built machine learning experiments and scripts utilizing Python to automate pipeline workflows.
